

About Multibanco

Established in 1985 initially as a network for ATM transactions, Multibanco has evolved to encompass not only ATM payments but also the introduction of online banking and mobile payments. The mobile counterpart, known as MB WAY, is experiencing increasing popularity with each passing day.

How does it work?

Utilizing Multibanco's online banking feature, customers can select their preferred bank for payment authorization within a secure banking environment. Additionally, customers have the option to finalize an online Multibanco payment within seven days through a Multibanco ATM. At the ATM, selecting the 'Checkout with Multibanco' option allows customers to use the online reference number for transaction verification and authorization with a Multibanco card. In both scenarios, customers receive a confirmation once the Multibanco transaction is successfully processed.

Benefits of Multibanco
